H1: Pharmaceutical Standards; Nutraceutical Expertise

Meta Description: eVia Labs is a trusted nutraceutical manufacturing partner for formulation, private labelling & contract production of tablets, capsules & powders.

What We Do

eVia Labs is a nutraceutical manufacturer that partners with wellness and pharmaceutical companies to bring reliable products to market.

We provide formulation, private labelling, and contract production across three core formats: tablets, capsules, and powders, with powders available in containers or single-serve sachets. Every service is built around the same commitment: pharmaceutical-grade controls, applied consistently batch after batch, backed by full documentation.

Who We Work With

eVia Labs' services are used by pharmaceutical and wellness organizations worldwide. Our clients generally fall into three groups: pharma companies diversifying into commercial nutraceuticals, D2C supplement brands building their own product lines, and exporters who need formulations that hold up to international scrutiny. Every client receives the same level of attention, from first inquiry through final delivery.

How We Work

eVia Labs' process is designed to remove guesswork from contract manufacturing. Every order follows the same stages: formulation, sample development, regulatory compliance, production, quality assurance, and final distribution, so a company always knows where its order stands and what's been verified at each step.

This means eVia Labs is a manufacturing partner that handles every client's product the way a leading pharmaceutical company handles its own product: recorded, tested, and consistent, no matter the order size or which label it ships under.

Hero

Headline: Three Formats, One Manufacturing Standard

Subheadline: As a nutraceutical products manufacturer, eVia Labs produces tablets, capsules, and powders under strict quality control, with every batch backed by FSSAI and WHO GMP compliance.

Tablets

Tablet production follows set specifications for weight, hardness, and disintegration. We test every batch before clearing it for packaging, so your final order matches your approved sample.

What we handle:

- Formulation to your dosage and ingredient specifications
- Batch production with documented process controls
- Testing for weight consistency, hardness, and disintegration
- Packaging in bottles, blister packs, or alu-alu strips

[Enquire About Tablets →]

Capsules

We produce hard-shell capsules with precise dosage control using pharma-grade ingredients, checking fill accuracy through the full run rather than a single point in the batch.

What we handle:

- Capsule formulation to your specifications
- Precise fill accuracy across the full batch
- Testing before packaging clearance
- Packaging in bottles or blister packs

[Enquire About Capsules →]

Powders

Our powders are produced in bulk containers or single-serve sachets, with consistent particle size and dosing accuracy across the batch. This format works well for protein blends, greens formulas, and single-dose supplement sachets.

What we handle:

- Powder formulation and blending to your specifications
- Container or sachet packaging, based on your product format
- Consistency checks on particle size and dosing
- Labelling ready for retail or export

How Product Development Works

1. Share your product requirements, including dosage, ingredients, and target format.
2. Our formulation team develops the formula and prepares a sample for your review.
3. Once you approve the sample, we move into batch production under documented quality checks.
4. Your order is packaged and shipped with the required documentation and labelling.

SERVICES PAGE

Hero

Headline: One Partner, From Formula to Finished Pack

Subheadline: eVia Labs offers nutraceutical contract manufacturing services, including private labelling, white labelling, and custom formulation, built to global standards, for wellness brands, pharma distributors, and exporters.

Batch Manufacturing

We manufacture tablets, capsules, and powders under documented, repeatable production processes. Every batch is recorded and tested, so your product quality stays consistent from your first order onward.

Private Labelling

As a private label nutraceutical manufacturer, we produce your product under your own brand name and trademark. You handle the branding and customer relationships; we handle the production, so the product reaching your customers meets the standard your label promises.

Custom Formulation

Our formulation team can also work with your ingredient list, dosage requirements, and label claims to build a formulation from scratch. Every formulation is developed to meet FSSAI RDA limits and relevant international standards. It is then fully documented to guarantee consistent repeat production.

Packaging & Labelling

We offer a range of packaging formats: bottles, blister packs, alu-alu strips, containers, and sachets. Products are labelled and packaged ready for retail shelf or export shipment, based on your requirements.

White Labelling

To launch a product line without developing a formulation from scratch, we also have white-label options that draw from proven, existing formulations. This lets you get to market faster while still meeting the same quality standards as our custom formulations.

How We Work

Every service runs through the same process: we start with your requirements, develop and approve a sample, move into documented batch production, and finish with packaging and dispatch. Whether you need one service or all five, you work with a single team throughout.

CAPABILITIES & PROCESS PAGE

Hero

Headline: How We Manufacture Your Product

Subheadline: Our nutraceutical manufacturing facility follows documented, pharma-grade quality checks at every stage, from formulation to final dispatch.

Our Manufacturing Facility

Our facility is located in Nellore, Andhra Pradesh, and handles formulation, production, and packaging under one roof. We manufacture tablets, capsules, and powders under FSSAI licensing and WHO GMP certification.

Keeping formulation, production, and packaging in one facility means fewer handoffs between vendors, tighter quality control, and more consistency across every batch we produce.

Our Process

1. Formulation: We develop and finalize your formulation based on the ingredients, dosage, and label claims you provide, working within FSSAI RDA limits and relevant international standards.

2. Sample Development: We prepare product samples for your review. You approve the formulation, format, and specifications before we move into full batch production.

3. Regulatory Compliance We complete the certifications and documentation required for your product and target market before production begins.

4. Production Nutraceutical manufacturing guided by pharmaceutical discipline. We manufacture your batch under pharma-grade quality and safety standards, with process controls documented at every stage.

5. Quality Assurance Each batch is tested before it is cleared for packaging. This includes checks relevant to the format, such as weight and hardness for tablets, fill accuracy for capsules, and particle size and dosing for powders.

6. Final Distribution We package and ship your order with all required regulatory documents and labelling, ready for retail or export.

Quality Control

Quality control is built into every stage of production at our GMP-certified facility, not just at the end of the batch. Raw materials are verified before entering production. In-process checks run continuously during manufacturing, and each finished batch is tested before packaging clearance. Every step is documented so you have a clear record for every batch you receive.

Certifications

- **FSSAI Licensed** — Our facility and products meet FSSAI regulatory requirements.
- **WHO GMP Certified** — Our manufacturing processes follow WHO Good Manufacturing Practice guidelines.

Headline: Let's Talk About Your Product

Subheadline: Whether you're looking for nutraceutical contract manufacturing, private labelling, or custom formulation, share your requirements and our team will respond within a day.

Contact Form

Section heading: Get in Touch

Fill in the form below with your product requirements. The more detail you share, the faster we can respond with relevant information.

Fields:

- Full Name*
- Company Name*
- Email Address*
- Phone Number*
- City / State*
- Product Type (Tablets / Capsules / Powders)
- Order Requirements (formulation status, expected order size, target market)
- Message

[Submit Inquiry]

Direct Contact

Phone: +91 999 888 7777 **Email:** contact@evialabs.com **Address:** Nellore Industrial Park, Plot 42, Andhra Pradesh, India

What to Include in Your Inquiry

To help us respond with useful information on the first reply, include:

- Whether you have an existing formulation or need one developed
- The product format you're looking for (tablets, capsules, or powders)
- Your target market (domestic or export)
- Any certifications or label claims you're working toward

For minimum order quantities and pricing, contact our team directly. These vary by formulation and format, so we work them out based on your specific product.
